The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. DAR59083 to ARF59099 and ARB69122 to ARB69132 represent sequences used the contraction of the contraction of the contraction.

The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB59122 to AAB69132 represent sequences used the contraction of the contraction of the contraction.

These may also be used to treat diseases, abnormalities and disorders caused by abnormal expression, production, function and/or metabolism of the genes, as vaccines for inducing immunological response in a mammal, and in screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polypeptides can be used as immunogens to produce antibodies immunospecific for the polypeptides, and to identify membrane-bound or soluble receptors. The polypuctides may be used as diagnostic reagents, in chromosome localisation studies, and in tissue expression studies. The present sequence represents the coding sequence of novel human secreted protein #12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New secreted proteins or polypeptides, useful for treating e.g. cancer, autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated novel secreted polypeptide (I) and polynucleotide (II). (I) and (II) are useful for treating cancer, autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, infilammatory disorders, infertility, neurological and disorders, infertility, neurological and disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            13-APR-2000; 2000US-196603P.

                        CC expressed sequence tag was used in the assembly of a full-length CC expressed sequence (see AAP2643) encoding a novel human growth CC cDNA sequence (see AAP2643) encoding a novel human growth CC cDNA sequence (see AAP2643) encoding a novel human growth CC regulatory-like polypeptide (GRLP, see AAB82671). The GRLP CC growth factors, human melanoma derived growth regulatory proteins, CC growth factors, human melanoma derived growth regulatory protein precursor (64% similarity and 45% identity over 111 amino acids) CC retinoic acid sensitive protein (CD-RAP, 44% identity and 64% cretinoic acid sensitive protein (CD-RAP, 44% identity and 64% cretinoic acid sensitive proteins. GRLP polypeptides and polymucleotides of the invention CC can be used in the prophylaxis, treatment (including gene therapy) CC and diagnosis of disorders and diseases caused by, or involving, CC cartilage development and maintenance, inhibition of melanoma cell growth and tumours, including neuroectodermal tumours such as CC gllomas. The polymucleotides can also be used to design probes CC and primers, for chromosome and gene mapping, in the recombinant production of protein, in the generation of antisense, ribozyme and CC peptide-nucleic acid molecules, and to produce transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human growth regulatory-like polypeptide clone 16372272

One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal

Claim 1; Fig 359; 567pp; English.

atherosclerosis, hypertension, arterial restenosis, rheumatoid arthrit angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumous angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a coding sequence of the invention. The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, Sequence 521 BP; 167 A; 86 C; 131 G; 137 T; 0 other; 100.0%; Score 330; DB 24; Pred. No. 4.2e-97; DB 24; Length 521; rheumatoid arthritis,

The PRO polynucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertrension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polynucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL88267 represent primers and probes used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Baker KP, Ferrara N,

The invention relates to one hundred and twenty two nucleic acids commoding PRO polypeptides. The sequences of the 122 PRO polypucleotides commode human secreted proteins. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating a PRO related disorder. CC cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or cliver tumour. The PRO polypeptides are useful for simulating the coliferation of, or gene expression, in pericyte calls, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating or inhibiting the proliferation of normal human dermal fibroblast cells. The PRO polypeptide may also be used as molecular bloody, including use as hybridisation probes, and in chromosome and gene mapping. ABK33536-ABX33657 represent human cry
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               28-UUL-2000; 2000WO-US20710

The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA biodiversity and for nutritional purposes.

```

```
CC identification number 16372272 (see AAH26341). A recursive cc algorithm was used to extend the clone by pulling additional CC sequences from different databases. A full-length sequence (see CC AH26343) encoding novel human growth regulatory-like polypeptide CC (GRLP, see AAB82671) was subsequently obtained. Human GRLP CC belongs to the same protein family as growth regulatory proteins, CC growth factors, human melanoma derived growth regulatory proteins or melanoma inhibitory activity, cattle cartilage-derived cretinoic acid sensitive protein (CD-RAP, 44% identity and 64% CC retinoic acid sensitive protein (CD-RAP, 44% identity and 64% CC similarity over 126 amino acids) and other recinoic acid-sensitive proteins. GRLP polypeptides and polymucleotides of the invention CC can be used in the prophylaxia, treatment (including gene therapy) CC and diagnosis of disorders and diseases caused by, or involving, CC cartilage development and maintenance, inhibition of melanoma cell growth and tumours, including neuroectodermal tumours such as CC gliomas. The polymucleotides can also be used to design probes CC and primers, for chromosome and gene mapping, in the recombinant CC production of protein, in the generation of antisense, ribozyme and CC peptide-nucleic acid molecules, and to produce transgenic animals. XX Sequence 891 BP; 272 A; 146 C; 214 G; 259 T; 0 other;

The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic anglogenesis.                                                                                                                                                                                                                                                                                      growth factors, human melanoma derived growth regulatory protein precursor (64% similarity and 45% identity over 111 amino acids) or melanoma inhibitory activity, cattle cartilage-derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid-sensitive proteins. GRIP polypeptides and polynucleotides of the invention can be used in the prophylaxis, treatment (including gene therapy) and diagnosis of disorders and diseases caused by, or involving, cartilage development and maintenance, inhibition of melanoma cell growth and tumours, including neuroectodermal tumours such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           human growth regulatory-like polypeptide (GRLP, see AAB82671). The sequence was assembled using human thymus cDNA library-derived Hyseq clone identification number 16372272 (see AAH26341) as seed, using software programs to pull additional sequences from Hyseq's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated human growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sig_peptide
                                                                                                                                                                                         gliomas. The polynucleotides can also be used to design probes and primers, for chromosome and gene mapping, in the recombinant production of protein, in the generation of antisense, ribozyme an peptide-nucleic acid molecules, and to produce transgenic animals. They may also have cytokine and cell proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   proprietary database containing expressed sequence tag sequences, and by gel sequencing using primers to extend both 5' and 3' ends. The predicted protein has a mol.wt. of 14 kDa unglycosylated. GRI belongs to the same protein family as growth regulatory proteins,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Page 115-116; 119pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (HYSE-) HYSEQ INC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          25-JAN-2000; 2000US-0491404

        The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59122 to AAB59132 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MLP; MIA; melanoma inhibitory activity; cancer; bone disease; joint disease; pathologic angiogenesis; diagnosis; antiinflammatory; cardiant; gene therapy; secretory cell function regulator; promoter;

The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint disease promoters and thibitors angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score
